Application has been made
to the AARC for 7.0 continuing education
contact hours for respiratory therapists.

Learning Objectives:

- Describe the type of patients and chronic conditions requiring a trach and mechanical ventilation.
- Define obesity hypoventilation syndrome, physiologic causes/contributions, and the treatment options for it.
- Describe what a normal vitamin D level is, why so many people are deficient, and what can be done to achieve a normal level; and explain how vitamin D deficiency may contribute to the development of asthma.
- Describe the bioethical principles which health care professionals should consider when patients and families request withdrawal of life support.
- Describe the different types/causes of Airway disease, treatment options available, and postoperative care/prognosis for Upper Airway Disease patients.
